Lectures on the Bishop-Phelps theorem and its relatives

Resumen:

Proved in 1961, the Bishop-Phelps theorem, dealing with support functionals of convex sets in Banach spaces, is relatively elementary but it and its subsequent generalizations (continuing to the present day) have been useful in many areas of functional análisis as well as mathematical economics and mathematical physics.

Horario:

Martes 5, 11h

Miércoles 6, 16h

Jueves 7, 11 h

5-7 de febrero de 2008
Seminario 222
