**“Stochastic solutions of kinetic equations and
tomographic data analysis: A survey of some
mathematical problems related to fusion
plasmas”**

ABSTRACT:

Efficient algorithms and solutions of charged kinetic equations as well as tools for plasma diagnostics are two important issues in fusion-related plasma physics. A survey is given of some of the mathematical problems related to these two topics.

Organizado por el Grupo de Investigación Cálculo Fraccionario y Aplicaciones de la UCM,
en colaboración con el IMI.
