## **On Tjurina number of plane curve singularities**

I will present some topics and calculations about the Tjurina number of a plane curve singularity. This is part of the main object of study of my Thesis in progress. The principal motivation is a question posed by A. Dimca and G.M. Greuel in 2017 which gives a surprising relation between two of the main invariants of plane curves singularities: Milnor number, of topological nature, and Tjurina number, of analytical nature. I will also present a partial answer to this question in the case of semi-quasihomogeneous singularities (joint work with G. Blanco) which constitute a new hope to achieve a positive answer to Dimca and Greuel's question in the general case.
