

Mathematical modelling of wound healing processes to help the treatment of chronic wounds

Etelvina Javierre

In collaboration with:

Fred Vermolen, Sergey Zemskov (TU Delft)

Pedro Moreo, José Manuel García-Aznar (UZ)

MEDICAL MOTIVATION

Open wounds compromise organ integrity by:

- decreasing the mechanical strength of surrounding tissue
- putting the immunology system at risk
- impairing organ function

Cancer as a wound that does not heal

MEDICAL MOTIVATION

Type of pathology	Number of patients per year		Total cost per year
Trauma	35.2 million	[USA data]	
Thermal injury	1 million	[USA data]	
Venous ulcers	600000	[USA data]	\$ 5.8 Billion
Pressure ulcers	1.4 million	[USA data]	\$ 2.2 Billion
Diabetic leg ulceration	670000	[EU data]	600 Million€
Prevalence of diabetic ulcers	6-7 million	[EU data]	> 5000 Million€
LEA in diabetic patients	65800	[EU data]	2.6 Billion€

INDUSTRIAL RELEVANCE

3

Podiatry services for profesional athletes,
but also general clinical practice

Multidisciplinary team of podiatrists,
physiotherapist, physicians and engineers

INDUSTRIAL RELEVANCE

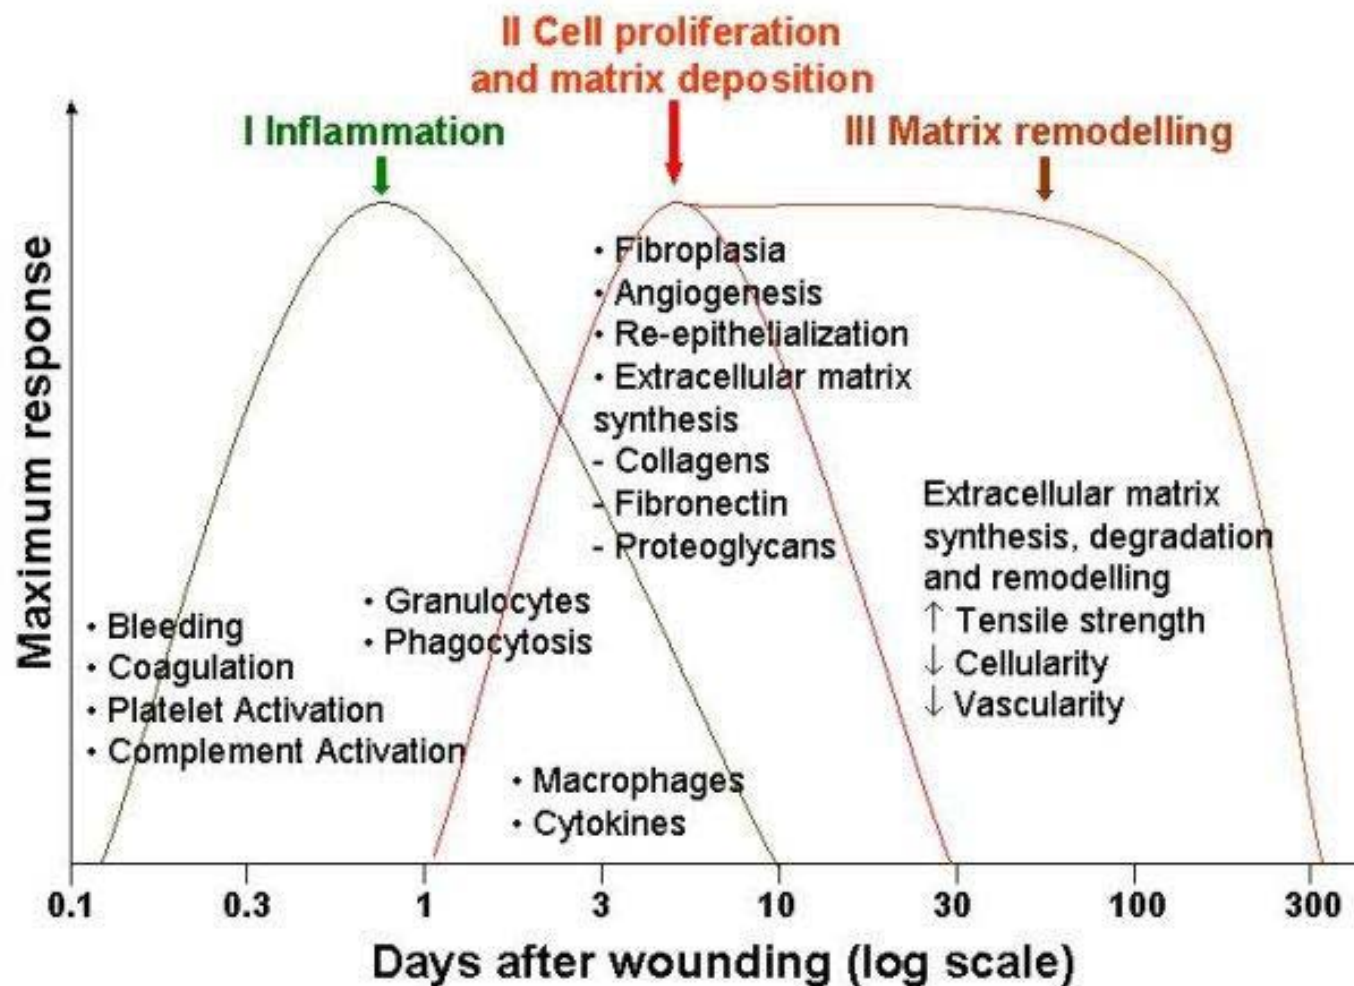

Patient specific prevention, prognosis and treatment of chronic pressure ulcers in diabetic patients through multiphysic and multiscale modelling

NORMAL WOUND HEALING

5

EVENTS THAT WE ARE GOING TO TARGET

6

1. Re-epithelialization

- repair of the connectivity of the basal membrane
- cell migration and mitosis triggered by released factors

2. Angiogenesis

- repair of the vascular network
- growth of vascular tips towards regions of low oxygen tension

3. ECM synthesis and wound contraction

- cellular synthesis of ECM components
- cell deformation and remodelling of ECM

EVENTS THAT WE ARE GOING TO TARGET

7

1. Re-epithelialization

- repair of the connectivity of the basal membrane
- cell migration and mitosis triggered by released factors

2. Angiogenesis

- repair of the vascular network
- growth of vascular tips towards regions of low oxygen tension

3. ECM synthesis and wound contraction

- cellular synthesis of ECM components
- cell deformation and remodelling of ECM

EVENTS THAT WE ARE GOING TO TARGET

8

1. Re-epithelialization

- repair of the connectivity of the basal membrane
- cell migration and mitosis triggered by released factors

2. Angiogenesis

- repair of the vascular network
- growth of vascular tips towards regions of low oxygen tension

3. ECM synthesis and wound contraction

- cellular synthesis of ECM components
- cell deformation and remodelling of ECM

HOW ARE WE GOING TO MODEL THEM?

9

Coupled systems of convection-diffusion-reactions

HOW ARE WE GOING TO MODEL THEM?

Coupled systems of convection-diffusion-reactions

rate of change
of cell density = cell
migration + cell
proliferation - cell
disappearance

$$\frac{\partial n_i}{\partial t} = \nabla \cdot \left(D_i \nabla n_i - C_{ij} n_i \nabla c_j - n_i \frac{\partial \mathbf{u}}{\partial t} \right) + r(c_j, \theta) n_i \left(1 - \frac{n_i}{n_i^0} \right) + k_+ n_j - k_- n_k - \lambda_i n_i$$

HOW ARE WE GOING TO MODEL THEM?

Coupled systems of convection-diffusion-reactions

rate of change of cell density = cell migration + cell proliferation - cell disappearance

$$\frac{\partial n_i}{\partial t} = \nabla \cdot \left(\boxed{D_i \nabla n_i} - C_{ij} n_i \nabla c_j - n_i \frac{\partial \mathbf{u}}{\partial t} \right) + r(c_j, \theta) n_i \left(1 - \frac{n_i}{n_i^0} \right) + k_+ n_j - k_- n_k - \lambda_i n_i$$

random dispersal

HOW ARE WE GOING TO MODEL THEM?

Coupled systems of convection-diffusion-reactions

rate of change of cell density = cell migration + cell proliferation - cell disappearance

$$\frac{\partial n_i}{\partial t} = \nabla \cdot \left(D_i \nabla n_i - \underbrace{C_{ij} n_i \nabla c_j}_{\text{chemotaxis}} - n_i \frac{\partial \mathbf{u}}{\partial t} \right) + r(c_j, \theta) n_i \left(1 - \frac{n_i}{n_i^0} \right) + k_+ n_j - k_- n_k - \lambda_i n_i$$

Coupled systems of convection-diffusion-reactions

rate of change of chemical species = chemical transport + chemical production - chemical depletion

$$\frac{\partial c_i}{\partial t} = \nabla \cdot \left(D_i^c \nabla c_i - c_i \frac{\partial \mathbf{u}}{\partial t} \right) + k_i^c (n_i + \xi n_j) \frac{c_i}{\Gamma_i + c_i} - \boxed{\delta_{ij} n_j c_i} - \lambda_i^c c_i$$

chemical uptake by cells

HOW ARE WE GOING TO MODEL THEM?

Coupled systems of convection-diffusion-reactions

rate of change of chemical species = chemical transport + chemical production - chemical depletion

$$\frac{\partial c_i}{\partial t} = \nabla \cdot \left(D_i^c \nabla c_i - c_i \frac{\partial \mathbf{u}}{\partial t} \right) + k_i^c (n_i + \xi n_j) \frac{c_i}{\Gamma_i + c_i} - \delta_{ij} n_j c_i - \lambda_i^c c_i$$

chemical decay

HOW ARE WE GOING TO MODEL THEM?

Coupled systems of convection-diffusion-reactions

rate of change of
ECM density = movement due
to deformation + synthesis - degradation

body forces = ECM resistive
forces + cell traction
forces

$$s\rho\mathbf{u} = \nabla \cdot \left(\mu_1 \frac{\partial \boldsymbol{\varepsilon}}{\partial t} + \mu_2 \frac{\partial \theta}{\partial t} \mathbf{I} + \frac{E}{1+\nu} \left(\boldsymbol{\varepsilon} + \frac{\nu}{1-2\nu} \theta \mathbf{I} \right) + p_{cell}(\theta) \frac{n_i}{R_i^2 + n_i^2} \rho \mathbf{I} \right)$$

NUMERICAL SOLUTION

- Self developed FE code in Matlab®
 - mesh generation
 - spatial discretization:
 - element matrices construction and assembly
 - temporal discretization: IMEM methods
 - moving boundaries
- Analysis to be conducted
 - healing of planar and circular wounds in 1D
 - sensitivity analyses to identify crucial parameters
 - healing of general wounds in 2D
 - evaluation of the results against experimental data
