**“The classification of multiplier algebras of
operator algebraic varieties”**

Martes 26 de mayo de 2015
a las 13:00 horas en el seminario 222

Abstract:

Much progress has been recently obtained, due to the work of many authors, in the classification of multiplier algebras of operator algebraic varieties. I will give an overview of this line of research and its recent developments. Particularly, I will present a result, joint with Michael Hartz, providing an obstruction to classification.
